

Logistics solutions that help businesses grow

COMPANY PROFILE 2026 | rev. 00

A story built on values

Founded in 1975 as a family-owned road haulier, Torello has kept its people-first approach at its core. Today, it is a partner for integrated logistics solutions—an ideal point of reference for increasingly personalized and sustainable distribution, where high quality standards and specialized expertise are essential.

As a full-service provider, Torello covers both transportation and warehousing logistics.

Flexible, collaborative solutions designed to create a positive impact across the entire logistics chain, involving customers in shaping each project.

Born from Nicola Torello's entrepreneurial vision, the company is now led by his children—Umberto, Concetta and Antonio—guided by the same enduring values.

Four perspectives. One clear direction.

Umberto Torello

Chief Operating Officer

He leads commercial and operational strategies, with a strong focus on efficiency and collaboration.

Nicola Torello

Founder

He founded the Group on a simple belief: creating value through work and people.

Concetta Torello

Chief Financial Officer

She oversees financial governance, combining vision, trust and a culture of value.

Antonio Torello

Chief Technical Officer

He leads the technical function with a strong commitment to sustainability and employees' improvement.

Moving strategies

At the heart of the supply chain, Torello connects production and consumption through more sustainable models.

Investing in enhanced services and long-term relationships helps our customers stay competitive in both domestic and international markets.

Our Moving Strategies start with industry insight and each customer's specific needs and translate into tailor-made logistics solutions.

This is how Torello becomes more than a transport provider—an enabler of shared growth.

Feel transport

For Torello, logistics is movement—but also the relationships between people who share the same values.

Service quality comes from alignment and day-by-day commitment, turning into tangible results.

Feel Transport is the energy that brings together expertise, experience and care—into a single engine for growth.

Transport becomes a shared experience, building trust and long-lasting partnerships.

Our history

- 1975** Nicola Torello founded Torello.
- 1992** The second generation—Umberto, Concetta and Antonio—joined the company.
- 2014** Torello acquired DIF, a dedicated network for food & beverage distribution.
- 2015** The warehousing logistics project took shape at the “Le Mose” Logistics Hub.
- 2017** The acquisitions of Topco and Ars Logica were formalised. Torello expanded into France, strengthening its presence along a strategic corridor.
- 2018** Antonio Torello was elected General Councillor of ANITA. Umberto Torello was elected President of the Food Transport Specialisation Section and President of Transfrigoroute Italy.
- 2024** Umberto Torello was re-elected for a fourth consecutive term.

A path we can take

What is sustainability? Values, backed by action. The first drives the second. On this belief, Torello has built a **sound growth strategy**—strengthening a reputation grounded in **people**, the **environment** and **financial reliability**.

Torello views **sustainability as a cultural shift** that involves every company within the Group.

It is a challenge that means **reducing environmental impact while keeping economic growth compatible**—progressively moving towards new development models. Only by **embracing sustainability in all three dimensions** can a company generate long-term value—for itself and its partners.

It doesn't happen by chance. It happens **one step at a time**.

Sustainability

Three dimensions, one balance

ENVIRONMENTAL

Preserving the Earth's limited resources is a shared responsibility. Torello reduces the impact of its operations by adopting technologies and innovations that optimise consumption, mileage and processes.

SOCIAL

Ensuring wellbeing and equal opportunities: Torello promotes inclusion and development through training, valuing skills and supporting employability, innovation and shared growth.

ECONOMIC

Sustainability means reliability: only a healthy company that generates income can sustain environmental and social projects, nurturing a virtuous cycle that benefits everyone.

READ THE **SUSTAINABILITY REPORT**

GLAP – Green Logistic Automation Platform

Launched by Torello in 2016, **GLAP is a sustainable development model** that integrates people and technology to make logistics operations more efficient.

Its innovation lies not in creating new technologies, but in making the most of existing ones—**connecting processes**, correcting in real time and improving service quality. The goal is clear: optimize consumption and costs, reduce waste and emissions, automate logistics phases, and simplify traceability and compliance.

Based on Industry 4.0 principles—IoT, predictive analytics and real-time traceability—GLAP turns data into actionable insights that support decision-making at every stage, from order intake to post-service analysis.

Road solutions

With **one of the most diverse and extensive fleets in Europe**, Torello designs solutions for businesses across multiple industries. Through a broad range of loading units, it carries both **ambient** and **temperature-controlled** goods.

By optimizing carriers and modes, Torello ensures a widespread distribution network that maximizes the advantages of each transport solution—integrating long-haul with a strategic last mile.

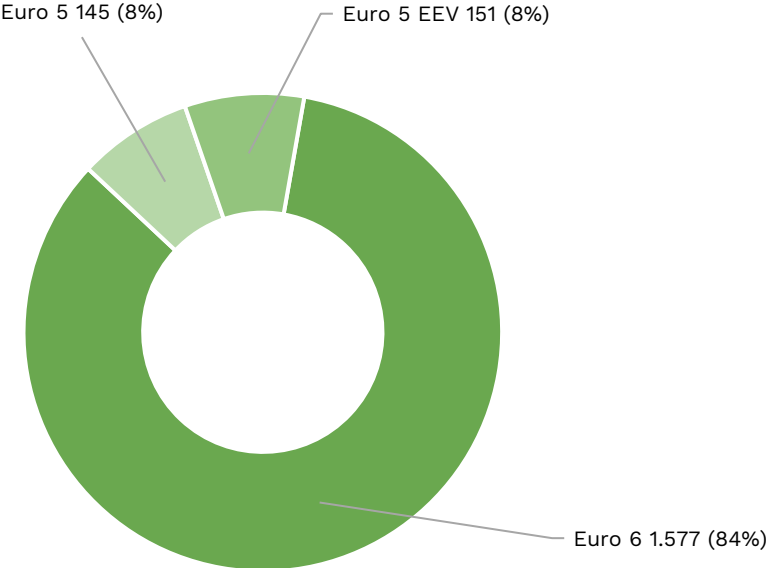

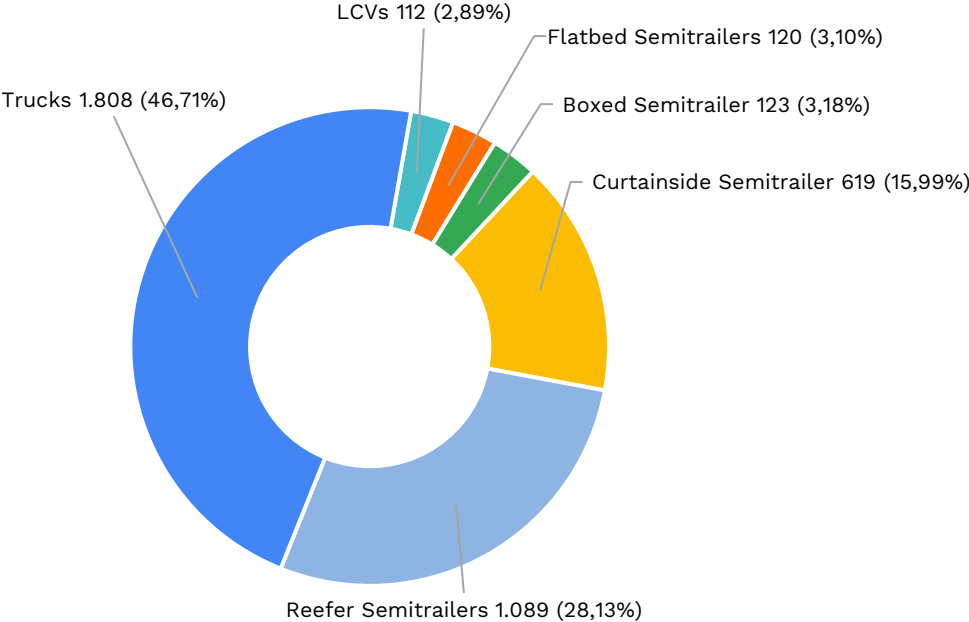

The Torello fleet includes **multi-temperature refrigerated vehicles of different sizes, as well as box and curtain-sided anti-theft units**.

Over 90% of the fleet meets Euro VI standards, complemented by LNG and hybrid additions and the use of HVO fuel—supporting lower CO₂ emissions and increasingly sustainable mobility.

This fleet configuration improves working comfort, reduces environmental impact and increases operational efficiency, also thanks to lower maintenance costs.

A fleet of over 4,000 company-owned vehicles ensures continuity and service quality across Italy and international markets.

A fleet of over 4,000 vehicles

Transportation

Torello provides an **end-to-end logistics system**, optimising every stage of the supply chain.

A **dedicated shuttle service** links company sites with warehouses and production facilities, ensuring operational continuity.

Full distribution covers the entire journey—from collection to final delivery—including order preparation.

With daily departures and defined lead times, Torello leverages **a nationwide network of hubs and transit points**, also supported by DIF Distribuzione Italiana Food, specialising in last-mile deliveries

for the food sector **servicing large-scale retail, local stores and HoReCa**, always maintaining the correct temperature.

International groupage - import and export - consolidates **shipments across Europe for both ambient and temperature-controlled goods**.

Last-mile logistics is a strategic element: Torello enhances it with efficient, more sustainable solutions for retail, large-scale distribution and B2B e-commerce. Continuous delivery optimization ensures every product reaches its destination in the most effective way.

Support

Through the evolution of our digital ecosystem — from vehicle onboard data to TMS, WMS, monitoring tools and ERP platforms — Torello's customer service goes beyond reactive support. Thanks to predictive data analysis, we identify potential critical points in advance, proactively contact our customers and promptly propose the most effective solutions. This approach reduces delays, unexpected events and operational inefficiencies, ensuring transparency, continuity and reliability throughout the entire logistics process.

Security

Security is central: advanced systems ensure traceability and temperature detection, vehicles protected by anti-theft devices, and Border Force recognition access the United Kingdom.

Visibility

We provide our customers with a structured and comprehensive set of **transport and warehousing KPIs**, ensuring end-to-end visibility across the entire supply chain.

Key metrics — including shipment volumes, **On-Time Delivery (OTD)**, **average delay**, **delivery status** and **Proof of Delivery (POD)** — are available in real time through dedicated dashboards and EDI integration.

On the **warehousing side**, we offer full transparency on **inventory levels**, **stock rotation**, **inbound and outbound flows** and **item-level data**.

Logistics & Handling

Torello manages the full range of sourcing and storage activities - **from collecting raw materials or semi-finished goods** at the customer's site **to inventory management, quality checks, packaging and line replenishment.**

Finished-goods logistics is different: when required, Torello provides **storage, picking, packaging, labelling, co-packing** and **distribution** to the destination.

On-site logistics

In response to growing demand, Torello developed an **on-site logistics model that gives customers full strategic control**, without the operational burden of managing day-to-day activities and workforce.

A **dedicated Torello team** operates directly within the customer's facilities, ensuring efficiency, continuity and responsiveness across logistics flows. Integrated services reduce time and management costs, optimize available resources and **free customers from operational tasks.**

Temperature-controlled warehouses

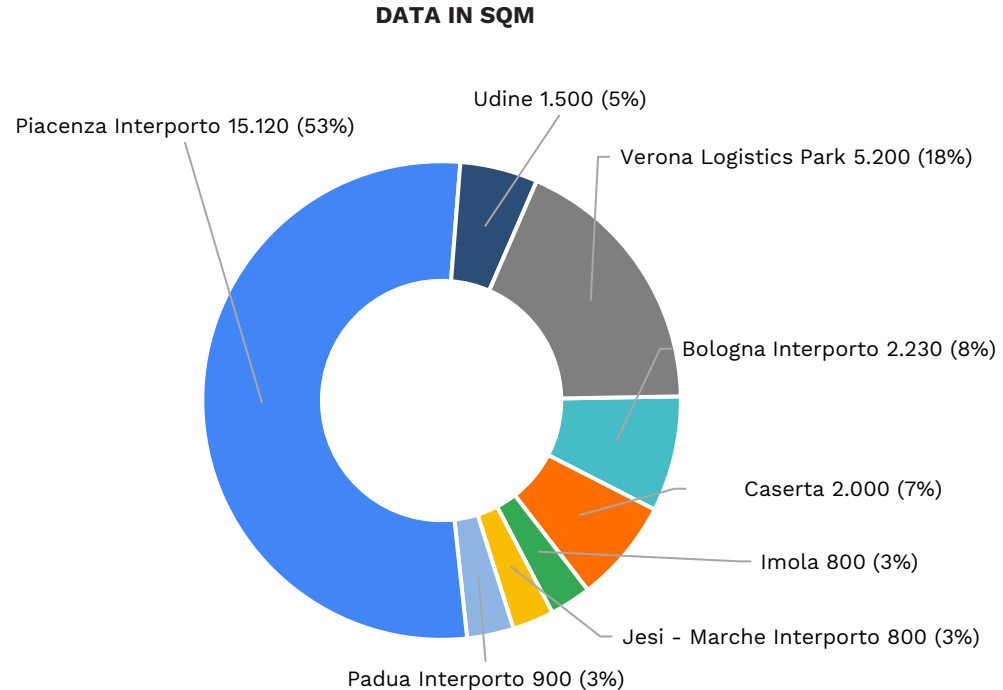

Cold chain continuity at every step.

Temperature-controlled warehouses are set to specific ranges to preserve each product category and its organoleptic properties.

Torello stands out for a wide availability of dedicated spaces and the ability to handle products across different temperature ranges:

- **-20°C;**
- **0/+4°C;**
- **Ambient;**
- **+16/+18°C.**

Chilled areas include multi-temperature chambers with certified temperature controls, supported by generators to protect goods from potential power interruptions.

Organic-certified warehouses

A logistics partner for companies operating in the organic market.

In response to growing demand, **Torello has certified and expanded areas dedicated to organic products**, in line with EC Regulation 834/2007 and national requirements.

Organic certification requires specific standards, including:

- ISO 9001:2015 Quality Management System,
- HACCP compliance statement,
- compliance with EC Regulation 834/2007.

Bonded warehouse and tax warehouse

Torello operates **warehouses authorised by the Customs Agency for the storage and processing of non-EU goods**, under VAT and excise suspension, with customs clearance in 24–48 hours.

While the bonded warehouse supports non-EU producers, the tax warehouse also allows Italian and EU products to be held under duty suspension until release to the target market.

This authorization has been assigned to **DIF Network**, a Torello subsidiary, to manage the logistics of alcohol and wine. Thanks to these advantages, DIF and Torello support numerous importers and spirits producers.
